EDUCATION

University of California, Los Angeles
Bachelor of Science, Computer Science

Los Angeles, CA
Expected Graduation: Dec. 2027

TECHNICAL SKILLS

Languages: TypeScript, Python, Java, C, C++, SQL, JavaScript, HTML/CSS

Frameworks & Libraries: Next.js, React, Tailwind CSS, FastAPI, Prisma, Node.js, Zod, Zustand, TanStack Query, React Flow

Databases & Infrastructure: PostgreSQL, Supabase, Firestore, Redis, Docker, Git, Linux/Unix, AWS Lambda, Kubernetes

EXPERIENCE

Undergraduate Researcher

Dec. 2025 – Present

UCLA Human-Computer Interaction Research Lab

Los Angeles, CA

- Building **HI-COS**, a human-in-the-loop system for scientific hypothesis generation and inspection, with a **Next.js 16**, **React 19**, **TypeScript**, **React Flow**, **Zustand**, **Zod**, **Tailwind CSS**, and **shadcn/Radix UI** frontend.
- Implemented a node-based hypothesis canvas that streams **8 server-sent event types** from a **FastAPI** backend, visualizing **6 model stages** across planning, research, ideation, composition, review, and refinement.
- Developing a **Python** multi-agent pipeline with **Pydantic AI**, **Perplexity/Gemini**, structured **Pydantic** outputs, and **Supabase** persistence across **4 core tables** for sessions, hypotheses, canvases, and debates.
- Translated findings from a **10-researcher** formative study into study-facing workflows for configuring agents from **5 source types** and **6 prompt-point categories**, targeting **3 core multi-agent challenges**: orchestration, cognitive overload, and evidence-grounded verification.

Software Engineer Intern

Mar. 2025 – Sep. 2025

Todd Agriscience

Los Angeles, CA

- Delivered **AI-driven crop insight dashboards** for **5–10** clients by architecting full-stack systems in Next.js, Tailwind CSS, and Framer Motion, integrated with **Palantir Foundry** and **AWS Lambda**.
- Developed dynamic data pipelines visualizing **20+** agricultural data streams including soil, irrigation, weather, and yield data to enable real-time farm management decisions.

Research and Development Engineer Intern

Jul. 2025 – Aug. 2025

Bonterra

Austin, TX

- Prototyped an **agentic AI system** for nonprofit event analytics using tool-calling frameworks and **Model Context Protocols (MCPs)**, modeling attendance, retention, and fundraising across datasets; benchmarked **5+** agent frameworks.
- Developed and tested a **multi-tool orchestration layer** enabling autonomous agent collaboration, improved retrieval latency by **22%**, and validated tool-selection policies for scaling across nonprofit datasets.

Software Engineer Intern

May 2025 – Jun. 2025

TensorStar

San Francisco, CA

- Engineered **real-time agentic UIs** with Next.js, Redux, and WebSockets, supporting **100+** concurrent users with **sub-100ms** latency while collaborating with a **10–15-engineer team** across frontend, ML, and infrastructure.
- Built secure credential-submission workflows integrated with **HashiCorp Vault** and a **Python + Redis backend**, unifying authentication across **50+** enterprise data sources including AWS Glue, Snowflake, MongoDB, Postgres, Airflow, dbt, and Spark.

PROJECTS

GitProof | *Next.js, TypeScript, PostgreSQL, Prisma, Gemini API, GitHub GraphQL API*

Dec. 2025 – Present

- Architected a full-stack developer portfolio platform transforming GitHub activity into recruiter-ready insights, processing **100+** repositories per user through a type-safe pipeline integrating the GitHub GraphQL API, PostgreSQL, and Prisma ORM.
- Designed a **3-factor** weighted impact scoring algorithm (**0–50** scale) combining logarithmic popularity scaling, recency decay across **5** time tiers, and project maturity signals to rank diverse portfolios with user-level weighted aggregation.
- Built an **AI-powered insights and content system** using Google Gemini 2.5 Flash to generate project descriptions, professional bios, and personalized portfolio feedback from repository metadata, documentation quality, and contribution patterns.

Logit | *Next.js, TypeScript, PostgreSQL, Prisma, React, Recharts, Anthropic API*

Mar. 2026 – Present

- Built a full-stack workout journal with authenticated logging, split planning, AI-assisted split generation, dashboard analytics, exercise history, and public profiles across a normalized **11-model** PostgreSQL schema.
- Engineered transaction-safe workout and split mutations across **12** API route files, combining payload validation, pound-based weight normalization, computed totals, derived read models, user-scoped cache invalidation, and trusted-origin protections.
- Added **23** TypeScript test files covering **76** cases across workout math, date-only scheduling, split rules, AI draft validation, payload normalization, read-model sync, service behavior, and export formatting.
