

Benjamin Garcia

(626) 246-4778 | bentgarcia05@gmail.com | [LinkedIn](#) | [Portfolio](#)

EDUCATION

University of California, Irvine

B.S., Computer Science — GPA: 4.0, Campuswide Honors Collegium

Irvine, CA

Expected Graduation: Jun. 2027

EXPERIENCE

Software Engineer Intern

May. 2025 – Present

TensorStar (\$5m VC-backed)

Remote

- Engineered real-time frontend systems using **Next.js**, **Redux**, **Tailwind CSS**, and **WebSockets** to support low-latency agentic interfaces and dynamic pipeline configuration.
- Designed and implemented credential submission UI integrated with **HashiCorp Vault**, securely interfacing with a **Python** & **Redis**-powered backend.
- Worked in a fast-moving startup environment, coordinating across frontend, ML, and infra engineers to ship high-stakes internal tooling backed by complex state logic and asynchronous task flows.

Full Stack Engineer Intern

Mar. 2025 – Present

Todd Agriscience

Remote

- Built and deployed a responsive, client-facing dashboard and company website using **Next.js**, **Tailwind CSS**, and **Framer Motion**, delivering interactive data visualizations for agricultural insights.
- Integrated backend services from **Palantir Foundry** and **AWS Lambda** to stream AI-analyzed crop data into real-time UI components, aligning frontend logic with backend inference pipelines.
- Collaborated with cross-functional teams to design scalable UI architecture, developed modular components with accessibility in mind, and documented systems for seamless handoff.

Frontend Developer

Sep. 2024 – Apr. 2025

AdeptEye

Walnut, CA

- Redesigned and optimized **Squarespace** and **Shopify** storefronts for two clients, **reducing load times by 40–50%** and boosting engagement to **1,800+ page views** in the first week.
- Implemented **dynamic product filtering**, dealer portals, and **POS integrations** to enhance e-commerce workflows and streamline transactions.

AI Engineer

Mar. 2024 – Apr. 2025

Outlier AI

Remote

- Optimized AI response pipelines through A/B testing and designed evaluation strategies**, analyzing response quality and identifying **hallucination patterns** to refine prompt engineering and enhance model accuracy.
- Engineered a recursive self-improvement method**, leveraging **failure-based training prompts** to improve LLM reasoning and reduce incorrect trend-based responses by **15–20%**.

PROJECTS

Mt. SAC Computer Science Club Website | *Next.js, Tailwind CSS, TypeScript*

Aug. 2024 – Present

- Overhauled the official site for a **900 member CS Club** achieving **100% Lighthouse accessibility** and **under 1s LCP** on desktop, and implementing a **component-driven architecture** with dynamic routes and JSON-configured events.
- Boosted traffic by **10x** in the first month post-launch through improved UX, responsive design, and centralized event & member access, resulting in an **80% increase** in mobile user retention and comprehensive advisor/officer directories.

het.ai | *Leap Motion, FastAPI, Firebase, Next.js, Tailwind CSS*

Apr. 2025

- Developed a **full-stack ergonomic tracking platform** to visualize live hand posture with **real-time angle calculations** (flexion, deviation, pronation), including an animated frontend displaying **animated hand skeletons** and diagnostic graphs with **React** and **Recharts**.
- Engineered high-frequency sensor data ingestion and smooth visualization by integrating **Firestore** with **FastAPI** and implementing **state interpolation**, ensuring robust real-time performance.

logit | *Next.js, Tailwind CSS, PostgreSQL*

Dec. 2024

- Developed a full-stack workout logging app portraying an intuitive UI for **seamless workout tracking and progress visualization** using a **react-calendar** and **Recharts** for trend analysis.
- Designed and optimized a **PostgreSQL database** to support flexible workout tracking with tags, comments, and dropsets, enabling comprehensive progressive overload analysis.

TECHNICAL SKILLS

Languages: Java, C++, SQL, Python, JavaScript, TypeScript, Liquid

Frameworks & Libraries: React, Next.js, Bootstrap, Tailwind CSS, Prisma

Developer Tools: Git, GitHub, VS Code, Netlify, Vercel, Vite,

Relevant Courses: Data Structures & Algorithms, Linear Algebra & Differential Equations, Discrete Mathematics, OOP
