EDUCATION

University of California, Los Angeles

Bachelor of Science, Computer Science

Los Angeles, CA

Expected Graduation: Dec. 2027

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Architecture, Programming Languages

EXPERIENCE

Undergraduate Researcher

Dec. 2025 – Present

UCLA Human-Computer Interaction Research Lab

Los Angeles, CA

- Designed, built, and deployed a **full-stack multi-agent research platform** using Next.js, TypeScript, FastAPI, and PostgreSQL; adapted the prototype into the controlled baseline for a **10-participant study**.
- Evaluated literature-retrieval architectures across **5 research domains and 20 uncached runs**, then implemented a hybrid Semantic Scholar pipeline combining query expansion, SPECTER embeddings, HDBSCAN clustering, and diversity-aware paper selection.
- Built study instrumentation, participant-to-workspace mapping, and revision-checked persistence across both study conditions, backed by **173 pytest and 40 Playwright tests** covering retrieval, interaction flows, and failure recovery.
- Conducted **10 user-study sessions** and contributed hypothesis evaluation, research figures, implementation documentation, and manuscript revisions to **PerspectEvolver**, submitted to **CHI 2027**.

Production Engineering Fellow

Jun. 2026 – Sep. 2026

Meta

Remote

- Deployed and operated a containerized **Flask/MySQL service on CentOS** behind Nginx with DuckDNS routing and defensive handling across deployment and runtime failures.
- Automated **CI/CD deployments** with unittest-based test gates, structured logging, and failure-aware deployment checks.
- Instrumented host and container health with **automated service checks, Prometheus metrics, Grafana dashboards, and alerting** for production observability.

Software Engineer Intern

Jun. 2026 – Aug. 2026

Lindy

San Francisco, CA

- Owned product and engineering work across Lindy's **React/TypeScript web application**, shipping customer-facing workflows for agent approvals, integrations, and Teammate migration.
- Built Lindy's **multi-tenant AI-agent guardrails and approvals platform**; retained **5,104 production decisions across 674 workspaces**.
- Took over a stalled Integrations unification effort and drove personal and team integrations to **100% GA**, consolidating the platform while net-deleting **4,521 lines**.
- Led engineering for Lindy's existing-user migration to Teammate, shipping Slack authorization, durable memory import, a five-step migration experience, and E2E launch gates; go-live reached **78 production completions and 50 activations**.
- Diagnosed a silent **21-minute production Slack hydration stall** and migrated orchestration from BullMQ to Temporal in one day; the following 14-day window recorded **409 runs with one failure**.

Software Engineer Intern

Mar. 2025 – Sep. 2025

Todd Agriscience

Los Angeles, CA

- Shipped production Next.js crop-intelligence dashboards for **5–10 clients**, integrating Palantir Foundry pipelines and AWS Lambda services to surface real-time agricultural insights.
- Built data pipelines visualizing **20+ agricultural streams** across soil, irrigation, weather, and yield data, enabling faster access to operational farm-management information.
- Helped scale engineering onboarding from **1 intern to 14 engineers** by creating development documentation, formalizing onboarding processes, and directly onboarding new contributors onto the codebase.

PROJECTS

PolicyC | TypeScript, Python, asyncio, SQLite, OpenAI API, Zod, FastAPI

Jul. 2026 – Present

- Built a source-preserving policy compiler, cutting mean input from **16.4K to 3.2K tokens** and billed API cost by **34%** in an eight-case, 64-response evaluation.
- Built a resumable Python asyncio runtime with atomic persistence and cost controls, achieving **3.60× effective throughput** across three held-out experiments.
- Evaluated **1,680 GPT-5 mini executions across 280 held-out cases**, measuring **76–86% preservation** of full-prompt critical-policy passes through strategy-blind grading.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C++, Java, SQL, CSS

Technologies: React, Next.js, Node.js, FastAPI, Flask, Temporal, Redis, PostgreSQL, SQLite, MySQL, GraphQL, WebSockets

Infrastructure: Docker, Linux/Unix, Nginx, Prometheus, Grafana, GitHub Actions, AWS Lambda, Playwright, Git
