EDUCATION

University of California, Los Angeles

B.S. in Computer Science

Los Angeles, CA

Expected Dec. 2027

Relevant coursework: Data Structures and Algorithms, Operating Systems, Computer Architecture, Programming Languages

EXPERIENCE

Undergraduate Researcher

Oct. 2025 – Present

UCLA Human-Computer Interaction Research Lab

Los Angeles, CA

- Built and deployed a multi-agent research platform in Next.js, TypeScript, FastAPI, and PostgreSQL; adapted it into the baseline for a **10-participant study**.
- Evaluated retrieval methods across **5 research domains**; built a Semantic Scholar pipeline with query expansion, **SPECTER embeddings, HDBSCAN clustering, and diversity-aware selection**.
- Instrumented both study conditions with participant-workspace mapping and revision-checked saves, tested with **173 pytest and 40 Playwright tests** covering retrieval, interactions, and failure recovery.
- Conducted **10 study sessions** and contributed hypothesis evaluations, figures, and manuscript revisions to **PerspectEvolver**, submitted to **CHI 2027**.

Production Engineer Fellow

Jun. 2026 – Sep. 2026

Meta & Major League Hacking

Remote

- Deployed a containerized Flask/MySQL application on CentOS behind Nginx during a 12-week fellowship, with unittest-gated CI/CD, structured logging, and deployment health checks.
- Monitored host and container health with Prometheus and Grafana; configured alerts for container failures and unavailable endpoints.

Software Engineer Intern

Jun. 2026 – Aug. 2026

Lindy

San Francisco, CA

- Built multi-tenant AI-agent guardrails with fail-closed enforcement and Slack/web approvals, handling **5,104 production decisions across 674 workspaces**.
- Took over a stalled project to unify personal and team integrations; reached general availability and removed a net **4,521 lines of code**.
- Instrumented and launched an unreleased Home page to all users; reached **64% of weekly product users** and removed **2,031 lines of legacy code**.
- Led engineering for existing users' migration to Teammate, shipping Slack authorization, durable memory import, and E2E launch checks; recorded **78 completed migrations and 50 activations**.
- Traced a **21-minute Slack data-loading stall** to KEDA scale-down; migrated BullMQ orchestration to Temporal in one day, with **one failure in 409 runs** over the next 14 days.
- Removed a **60-second email delay** on a path handling **28K sends/week** after confirming **all 68 sampled prompts** were redundant countdowns, not approval requests.

Software Engineer Intern

Mar. 2025 – Aug. 2025

Todd Agriscience

Los Angeles, CA

- Shipped production Next.js crop-intelligence dashboards for **10 clients**, integrating Palantir Foundry pipelines and AWS Lambda services.
- Built data pipelines for **20+ agricultural data streams**, feeding soil, irrigation, weather, and yield visualizations.
- Supported the engineering team's growth from **1 intern to 14 engineers** by writing development documentation, standardizing onboarding, and guiding new contributors through the codebase.

PROJECTS

PolicyC | *TypeScript, Python, asyncio, SQLite, OpenAI API, Zod, FastAPI*

Jul. 2026 – Present

- Built a compiler that selects applicable rules from policy graphs using typed request state, reducing mean prompt input by **89–98%** across five frozen held-out studies.
- Preserved **76–86% of full-prompt critical-policy passes** in a strategy-blind evaluation of **1,680 GPT-5 mini runs across 280 held-out cases**; reference self-consistency was 90.4%.
- Built a resumable Python asyncio runner with atomic persistence, hash-linked artifacts, and cost ceilings, reaching **3.60× effective throughput**; rejected a sixth compiler version at a preregistered gate of 440 hidden assertions.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C++, Java, SQL

Technologies: React, Next.js, Node.js, FastAPI, Flask, Temporal, Redis, PostgreSQL, SQLite, MySQL, GraphQL, WebSockets

Infrastructure: Docker, Linux/Unix, Nginx, Prometheus, Grafana, GitHub Actions, AWS Lambda, Playwright, Git
